Firebase - Ex

Create a web site for managing Cars

Each Car has :

- Model
- Year
- Color

The data will be managed in Firebase server !

The client (Raeact) will have a dashboard with the follwing components:

- "Cars" comp – presents all the cars data (with an option to delete a car)
- "Add Car" component – will add a new "Car"

All Data will be saved and managed in a Redux Store

A Click on a "Save Changes" will save all changes to the firebase !
